

Physician Schedule Manager

Optum® Physician Schedule Manager provides physicians with easy access to their patient schedules from the same desktop and handheld devices they use for their non-clinical schedules. With Optum Physician Schedule Manager, physicians can view their personal, departmental and patient schedules in their Microsoft® Outlook calendar.

Compile schedules and patient appointments into one easy-to-access tool

Many physicians still plan their day by consulting printed appointment calendars that may conflict with departmental and personal obligations. These paper schedules can be obsolete the moment they are printed. They also do not inform the provider of last-minute cancellations or scheduling changes, risking poor utilization. Get rid of paper schedules and eliminate confusion while streamlining your practice.

Optum Physician Schedule Manager:

- Consolidates personal, departmental and patient schedules
- Empowers existing digital devices with relevant appointment data
- Incorporates pertinent data into one platform for seamless access to information

Physicians can get a consolidated view of their schedule on their smartphone or other personal digital device.

Scalable technology

Optum Physician Schedule Manager consolidates scheduling information via a scalable technology designed to meet the demands of busy practitioners. Registration and scheduling, key components of every practice management system, offer both accurate patient demographic information and a sophisticated tool for the management of the clinical schedule. Combining Microsoft Exchange/Outlook data with registration and scheduling data provides an easy-to-use platform for time management, collaboration and messaging.

Consolidated calendar view

With Microsoft Outlook as the standard schedule and messaging solution for many enterprises, health care providers are required to manage their clinical duties from a separate calendar on a separate application. Optum Physician Schedule Manager introduces easier workflows by eliminating duplicate data entry. Physicians, health care providers and administrative staff all benefit from the consolidated calendar view.

Schedule Manager solutions

Optum Physician Schedule Manager is a part of Optum Consulting Interface Framework Solutions. The Interface Framework is a flexible, high-performance transaction engine that combines open standards HL7 messages and flexible format control to leverage proprietary data formats. Optum Physician Schedule Manager collects patient schedule updates (such as new appointments, arrivals and cancellations) and demographic updates (such as insurance and phone number changes) and transmits them to Microsoft Exchange, where they are available within physicians' calendars.

- **Collector:** gathers information from the schedules of selected physicians and files them into a queue
- **Communicator:** reads collector queue and sends messages to AutoFiler
- **AutoFiler:** receives messages and files the appointments into Microsoft Exchange
- **Watchdog:** monitors processes and alerts staff if the interface shuts down for any reason

Consolidate physician calendars and eliminate paper schedules
